

SWITCHES:

- FC-EN: Enable fuel cell contribution to Vbus.
- BT-EN: Enable battery contribution to Vbus. Must be turned off prior to battery charging.
- MT-EN: Enable power to the VESC motor driver.
- BT-SQ: Battery sequencing switch. Must be off during startup, but held on otherwise to ensure battery charger can read battery voltage.
- BC-FC: Connects the fuel cell charging path to the battery charger input. Must be turned on only after BT-EN is turned off.
- BC-RG: Connects the regen charging path to the battery charger input. Must be turned on only after BT-EN is turned off.
 - Potentially: Ensure that BC-FC and BC-RG are not turned on simultaneously.
